Bulk Weigher

Our bulk weighing systems are a great addition to any facility. They improve load out capabilities and allow for sale on origin weights. The bulk weighing systems will match any customer need with the ability to load out at a range of 5,000 – 120,000 BPH. This greatly improves load out capabilities for trains, trucks, barges, as well as in process plant weighing needs. This will also reduce the liability of costly damage charges from over load out time on trains. A popular option is our climate controlled control room, and grading rooms. This option allows operators to accurately control load out processes and to ensure proper grading. Thus reduces the potential for under/over loading, and it also reduces the risk of transporting off grade batches of grain. To get additional information about our bulk weighing systems please contact us and speak to a sales representative today!

Common Sizes:

- 5,000 BPH
- 10,000 BPH
- 20,000 BPH
- 50,000 BPH
- 75,000 BPH
- 120,000 BPH
- Custom sizes available

Key Features:

- Fast acting hydraulic gates
- High impact tile lining
- Batch processing
- Service and maintenance platforms
- Prefabricated lifting lugs

Options:

- Custom upper garner capacities
- Built in control & grading rooms
- Hydraulic or cable load out spouting
- Custom lining options available
