

Innovative Ag Products

Common Sizes:

- 500,000 Bushels
- 750,000 Bushels
- 1.2 Mil. Bushels
- 1.5 Mil. Bushels
- 2 Mil. Bushels
- Custom Sizes Available

Common Fill Rates:

- 10,000 BPH
- 15,000 BPH
- 20,000 BPH
- 30,000 BPH
- 40,000 BPH

Key Features

- Smooth wall construction
- Built in aeration
- Gate control system for even filling
- Full service platforms and ladder accesses
- Cushioned fill spouting
- Internal access ladder and platforms
- Tarp attachment's
- Tarp lifting points

Options

- Custom fill rates
- Custom capacity adjustments
- Tarp lift ring
- Aeration ducting
- Pile load out or reclaim system
- Receiving systems
- Steel perforated bunker bunker walls
- Concrete Bunker walls

Pile Towers

IAP (Innovative Ag Products) offers a variety of pile tower options for all our customer needs. With standard capacities to pile 300,000 — 2 million bushels at a fill rate of 10,000— 40,000+ BPH. Our pile tower systems have a smooth wall constructed surface to eliminate grain bridging and structural issues. This utilizes a bottom draw

aeration system to ensure proper pile conditioning throughout the pile. These systems come with predesigned spouting that contain grain dampeners to help prevent grain damage from occurring. Our pile towers have internal ladder accesses to ensure any maintenance can be done without any special equipment or costly service calls. To ensure even filling, our towers come equipped with top gate controls for operators to have direct control of grain piling. This is important to eliminate valleys on a tarp pile, which limits water ponding. Pile towers have become an effective means of storing grain at an efficient cost compared to vertical storage. As local markets continue to increase annual yields its important for grain handler's to increase their storage at an efficient cost and in a timely manor. If you would like more information about our piling systems please feel free to contact our sales staff.
