

Innovative Ag Products

Gates

Key Features:

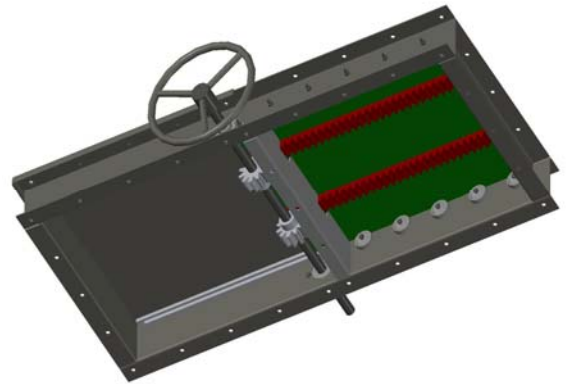

- Variable Sizes
- Simple design
- On hand inventory
- Multi function
- Easy maintenance
- Custom colors available

Options Available

- Weather covers
- Dust return hopper
- Hand wheel
- Cable wheel
- Chain Wheel
- Access platform
- Load out platform
- Service platform
- Open and close indicator switches
- Potentiometer/percentage meter
- Linear actuated electric gate
- Standard electric actuated
- Pneumatic actuated
- Hydraulic actuated

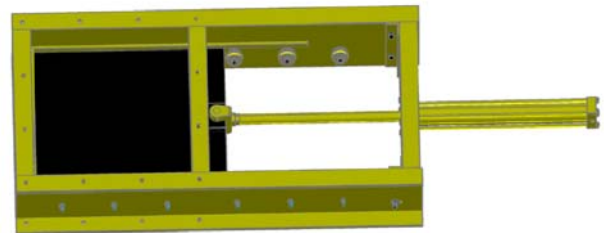

R&P Gates

Rack and pinion gates are an economical, simple solution, with many different uses in the commodities industry. As facilities become more complex R&P Gates are a great accessory to use to stop or divert the flow of grain or other commodities. Available in manual, electric, hydraulic, and pneumatic actuated models.

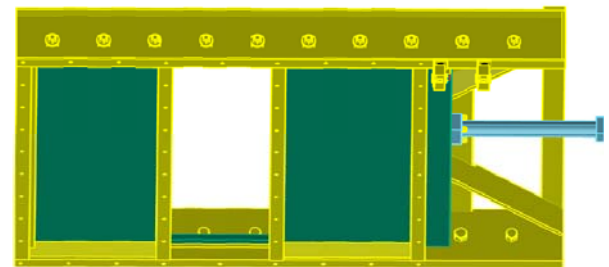

Hydraulic Gate

In many facilities automation has become an integral part of their commodity handling. Hydraulic gates offer the ability to be directly controlled by an operator and programmed into many different facilities operating systems. With a high torque capacity these gates are ideal for high speed and forceful gate closing.

Ladder Gates

Hydraulically driven, ladder gates are another option that offers high torque commodity control. These gates are designed to reduce gate wear and to also reduce gate travel time. Being so this improves batching, scaling efficiency, and overfilling weigh hoppers.
