

Innovative Ag Products

Key Features:

- 10' x 24' Grated Area
- Typically 1,100 Bushel Capacity
- 7 Gage Construction
- Painted 2-part Epoxy (Bed liner)
- Bypass inlet
- Inside Access Ladder
- Switch Mounting Plate Inside Pit

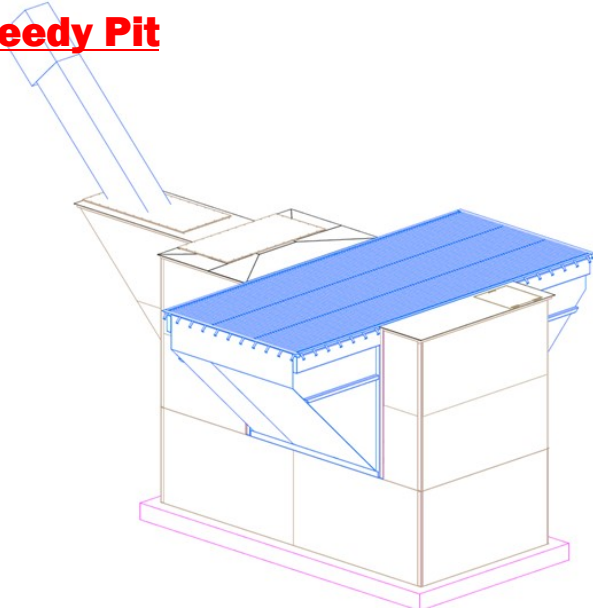

Options Available

- Custom Sizes Available
- 12'x26' Pit Cover
- In House Site Layout
- Custom Pit Enclosure
- Dewatering system
- Reclaim hopper
- Machinery access cover

Inclined Conveyor-Speedy Pit

A new addition to IAP speedy pit options is our in-ground Inclined conveyor receiving pit (I.C. Speedy Pit). Many instances arise where the biggest constraint on your project is available space. This new option allows for customers to create less FM and to also save space while maintaining higher capacity rates.

Do you want to speed up your unloading process and return to the field faster than ever before? Our Speedy Pit is designed with your operation in mind. The first thing we hear as the manufacturer, after one of our Speedy Pits has been installed, is that our customer was not only able to save time but money as well by eliminating a truck and a driver from the hauling process. Holding capacity of the Speedy Pit is 250 -1,450 bushels with 1,100 bushels being common. Unloading trucks takes only minutes with the capability to dump both hoppers simultaneously. Our Speedy Pit was designed in a 5 piece modular system to allow for fast and economical installation. This allows the unit to be shipped on a standard flatbed semi trailer in two loads without the need for special permits, decreasing freight cost.
